Personal Statement

Dear Committee of the 22nd Doctoral Consortium on Logic Programming,

I believe that the story of how we move is the story of who we are.

My name is Ryan Kepler James Murphy, a Ph.D. student supervised by Prof. Dr. Torsten Schaub at Universität Potsdam in Germany within the Institute of Computer Science. I am currently in my second year of studies with the Knowledge Representation and Reasoning (KRR) group, where my research applies answer set programming to large railway systems. I apply techniques from multi-agent pathfinding, temporal logic, and reasoning under uncertainty to problems faced by large railway operators such as routing, vehicle scheduling, and vehicle rescheduling. My ambition has always been to find a way to have a meaningful impact on society, and I hope my research can be a path to do that.

I would be honored to take part in the 22nd Doctoral Consortium, as this would be my first opportunity to get feedback in such a large and varied setting. I place value both on learning from those with experience and understanding work from an interdisciplinary perspective. And I believe that success comes from humility and collaboration. This would be a wonderful opportunity to grow, as well as to learn how contribute to the success of others. Thanks in advance for your time and consideration, and I wish all the best with the organization and execution of this year's events.

Best regards,

Ryan Kepler James Murphy
